San Antonio Housing Authority  
Attn: Mr. Ramiro Maldonado  
818 South Flores St.  
San Antonio, TX 78204

Dear Mr. Blair,

Enclosed are six mold reports done by Aladdin Environmental LLC. These reports cover the 100 units at Blanco Apartments. The sampling protocol used was to take an air sample and a swab sample in the space above the kitchen ceiling where the HVAC system is located in every unit. Four marker fungi and one fungus were used to determine the extent of contamination in the units. The marker fungi typically indicate indoor mold contamination. The enclosed spreadsheet indicates the six marker fungi and their presence inside triggered a contaminated unit. In addition, a count of greater than or equal 500 count per cubic meter of air for *Aspergillus/Penicillium*.

Very truly yours,  
ENVIRONMENTAL/OCCUPATIONAL SOLUTIONS CORP.

  
Jon Jackson, MSEH
